INTENDED USE
LeukoReduced RBC is used as a complete process control to monitor leukoreduced red blood cell products, including the dilution and staining process, method setup and WBC enumeration.

SUMMARY AND PRINCIPLE
It is an established laboratory practice to use a stable control to monitor the performance of diagnostic tests. This control is composed of stable materials that provide a means of monitoring the performance of methods that measure residual leukocytes in blood products. It is sampled in the same manner as blood products used for transfusion purposes.

REAGENTS
LeukoReduced RBC is an in vitro diagnostic reagent composed of mammalian erythrocytes and human leukocytes suspended in a plasma-like fluid with preservatives.

PRECAUTION
LeukoReduced RBC is intended for in vitro diagnostic use only by trained personnel.

WARNING
POTENTIALLY BIOHAZARDOUS MATERIAL. For in vitro diagnostic use. Each human donor/unit used in the preparation of this product has been tested by a FDA licensed method/test and found to be negative or non-reactive for the presence of HBsAg, Anti-HCV, NAT testing for HIV-1, HCV (RNA) and HIV-1/2. Each unit is also negative by a serological test for Syphilis (RPR or STS). Because no test method can offer complete assurance that infectious agents are absent, this material should be handled as potentially infectious. When handling or disposing of vials follow precautions for patient specimens as specified in the OSHA Bloodborne Pathogen Rule (29 CFR Part 1910.1030) or other equivalent biosafety procedures.

STABILITY AND STORAGE
Store LeukoReduced RBC upright at 2 - 8° C (35 - 46° F) when not in use. Protect tubes from overheating and freezing. Unopened tubes are stable through the expiration date. Opened tubes are stable for 30 days or 21 thermal cycles (uses), whichever comes first, provided they are handled properly.

INDICATIONS OF DETERIORATION
After mixing, product should be similar in appearance to fresh whole blood. In unmixed tubes, the supernatant may appear pink; this is normal and does not indicate deterioration. Other discoloration, very dark red supernatant or unacceptable results may indicate deterioration. Do not use the product if deterioration is suspected.

INSTRUCTIONS FOR USE
1. Remove tubes from the refrigerator and allow to warm to room temperature (15 to 30°C or 59 to 86°F) for 15 minutes before mixing.
2. To mix, hold a tube horizontally between the palms of the hands. Do not pre-mix on a mechanical mixer.
   a) Roll the tube back and forth for 20 - 30 seconds; occasionally invert the tube. Mix vigorously, but do not shake. Tubes stored for a long time may require extra mixing.
   b) Continue to mix in this manner until the red cells are completely suspended. Tubes stored for a long time may require extra mixing. Confirm that cell button on bottom of tube is suspended.
   c) Gently invert the tube 8 - 10 times immediately before sampling.
3. After sampling:
   a) After sampling, clean residual material from the cap and tube rim with a lint-free tissue. Replace the cap tightly.
   b) Return tubes to refrigerator within 30 minutes of use.
EXPECTED RESULTS
Verify that the lot number on the tube matches the lot number on
the table of assay values. Assay values are determined on well-
maintained, properly calibrated instruments using the instrument
manufacturer’s recommended reagents. Reagent differences,
maintenance, operating technique, and calibration may contribute
to inter-laboratory variation.

PERFORMANCE CHARACTERISTICS
Assigned values are presented as a Mean and Range. The
Mean is derived from replicate testing by the specific method.
The Range is an estimate of variation between laboratories and
also takes into account inherent imprecision of the method and
expected biological variability of the control material.
Assay values on a new lot of control should be confirmed before
the new lot is put into routine use. The laboratory’s recovered
mean should be within the assay range.

For greater control sensitivity each laboratory should establish its
own mean and acceptable range and periodically reevaluate the
mean. The laboratory range may include values outside of the
assay range. The user may establish assay values not listed on
the Assay Sheet, if the control is suitable for the method.

LIMITATIONS
The performance of this product is assured only if it is properly
stored and used as described in this insert. Incomplete mixing of
a tube prior to use invalidates both the sample withdrawn and
any remaining material in the tube.

TECHNICAL ASSISTANCE AND CUSTOMER SERVICE
For assistance in resolving control recovery problems, please call
Technical Service at (800) 523-3395. For additional information
on R&D Systems, Inc. hematology controls and calibrators, or to
place an order, call Customer Service at (800) 428-4246.

QUALITY CONTROL PROGRAM
For information on CBC-Monitor, our Inter-Laboratory Quality
Control Program, call (800) 523-3395 ext. 4435.
